

UnitedHealthcare Insurance Company

Part II: Written Justification of Rate Increase

Mississippi 2026 Individual Exchange Rates

June 20, 2025

Part II: Written Description Justifying the Rate Increase

This document contains confidential, proprietary information and trade secrets. Disclosure of the information would cause harm to this company's business operations. It is not otherwise readily ascertainable or publicly available. This information is strictly confidential and protected from disclosure by state law. This document will be made public at request of the DOI at a later date.

The following memorandum describes the key drivers of the rate changes of individual rates for UnitedHealthcare Insurance Company ("UHCMS"). UHCMS policies are individual medical plans offered in Mississippi and are fully compliant with the Patient Protection and Affordable Care Act.

Scope and Range of the Rate Increase

UHCMS is filing 2026 rates for individual products. The proposed rate change is 24.80% and will affect 11,216 individuals. The rate changes vary between 19.47% and 27.94%. Given that the rate changes are based on the same single risk pool, the rate changes vary by plan due to plan design changes.

Financial Experience of the Product

The premium collected in plan year 2024 was \$58,029,075. Incurred claims during this period were \$30,310,559 and UHCMS expects to pay \$8,253,156 in risk adjustment. The loss ratio, or portion of premium required to pay medical claims, for plan year 2024 is 66.46%.

Changes in Medical Service Costs

There are many different healthcare cost trends that contribute to increases in the overall U.S. healthcare spending each year. These trend factors affect health insurance premiums, which can mean a premium rate increase to cover costs. Some of the key healthcare cost trends that have affected this year's rate actions include:

- Increasing cost of medical services: Annual increases in reimbursement rates to healthcare providers, such as hospitals, doctors, and pharmaceutical companies.
- Increased utilization: The number of office visits and other services continues to grow. In addition, total healthcare spending will vary by the intensity of care and use of different types of health services. The price of care can be affected using expensive procedures such as surgery versus simply monitoring or providing medications.
- Expiration of enhanced premium tax credits: Expanded and enhanced federal premium tax credits for consumers will expire at the end of 2025. As a result, post-tax credit premiums will increase for calendar year 2026.
- Changes in market morbidity: Premiums reflect the expected increase in the average cost per member due to healthier members leaving the market if enhanced ATPCs are allowed to expire.

Changes in Benefits

There were no significant changes in the benefits offered by UHCMS's plans.

Administrative Costs and Anticipated Margins

UHCMS works to directly control administrative expenses by adopting better processes and technology and developing programs and innovations that make healthcare more affordable. We have led the marketplace by introducing key innovations that make healthcare services more accessible and affordable for customers, improve the quality and coordination of healthcare services, and help individuals and their physicians make more informed healthcare decisions.

Taxes and fees imposed by the state and federal government are significant factors that impact healthcare spending and must be included as additional administrative costs associated with the plans. These fees include Affordable Care Act taxes and fees which impact health insurance costs and need to be reflected in premium. Another component of premium is margin, which is set to address expected volatility and risk in the market.

The requested rate change is anticipated to be sufficient to cover the projected benefit and administrative costs for the 2026 plan year.

Sincerely,

_____
